Physical Layer Protocols & Services

- Describe the purpose of the Physical layer in the network and identify the basic elements that enable this layer to fulfill its function

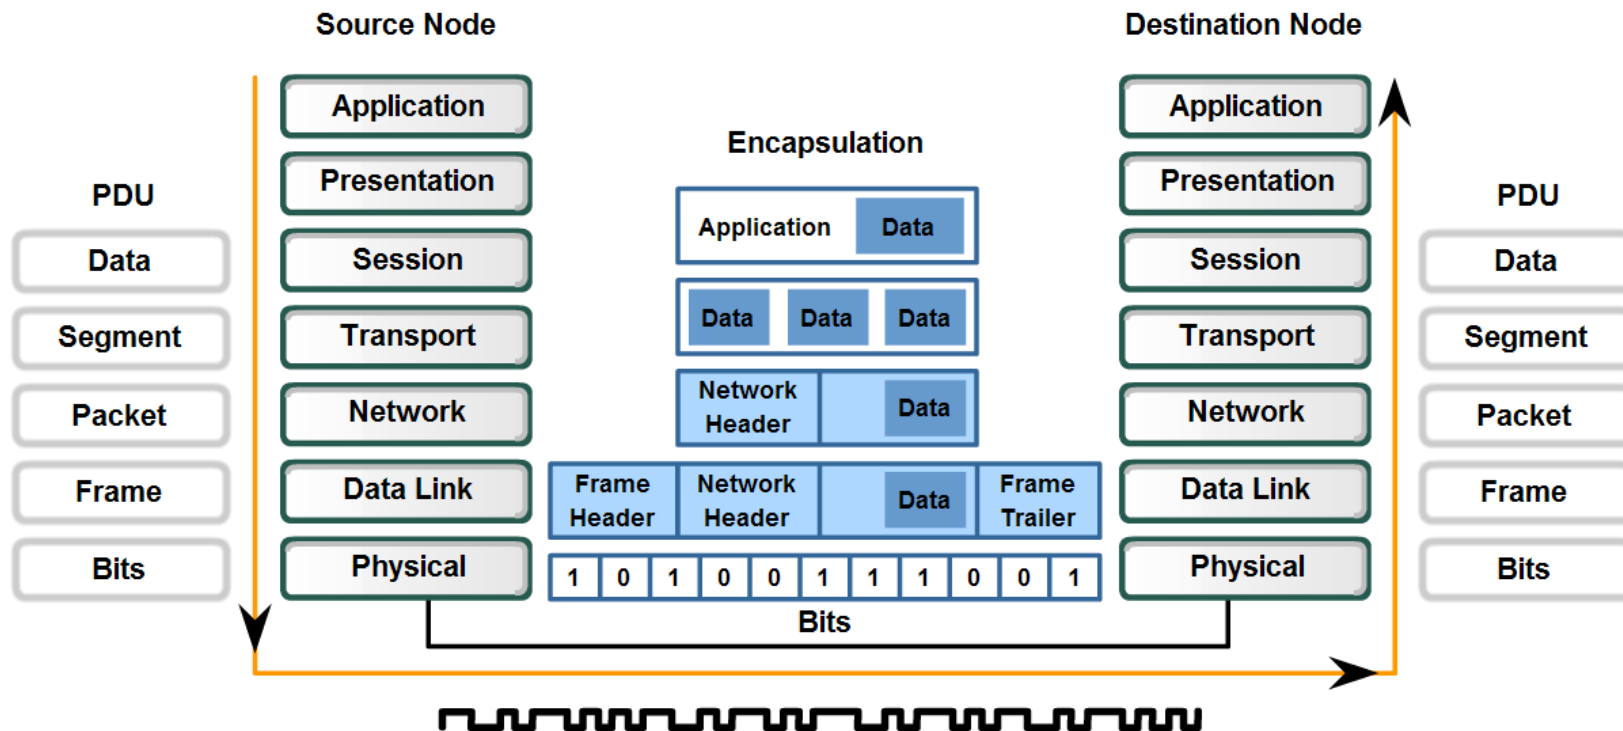

The Physical layer interconnects our data networks.

Physical Layer Protocols & Services

- Describe the role of bits in representing a frame as it is transported across the local media

Transforming Human Network Communications to Bits

Physical Layer Protocols & Services

- Describe the role of signaling in the physical media

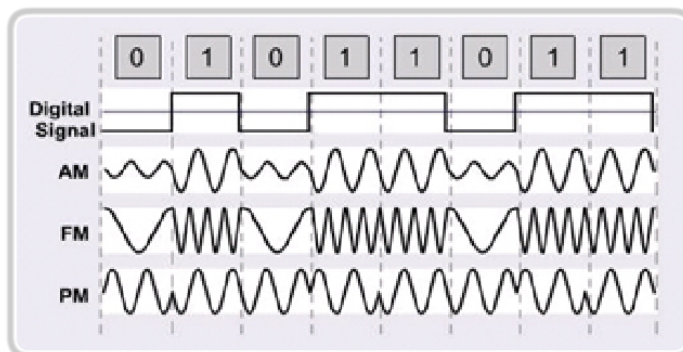

Representations of Signals on the Physical Media

Microwave (wireless) signals

Physical Layer Protocols & Services

- Distinguish who establishes and maintains standards for the Physical layers compared to those for the other layers of the network

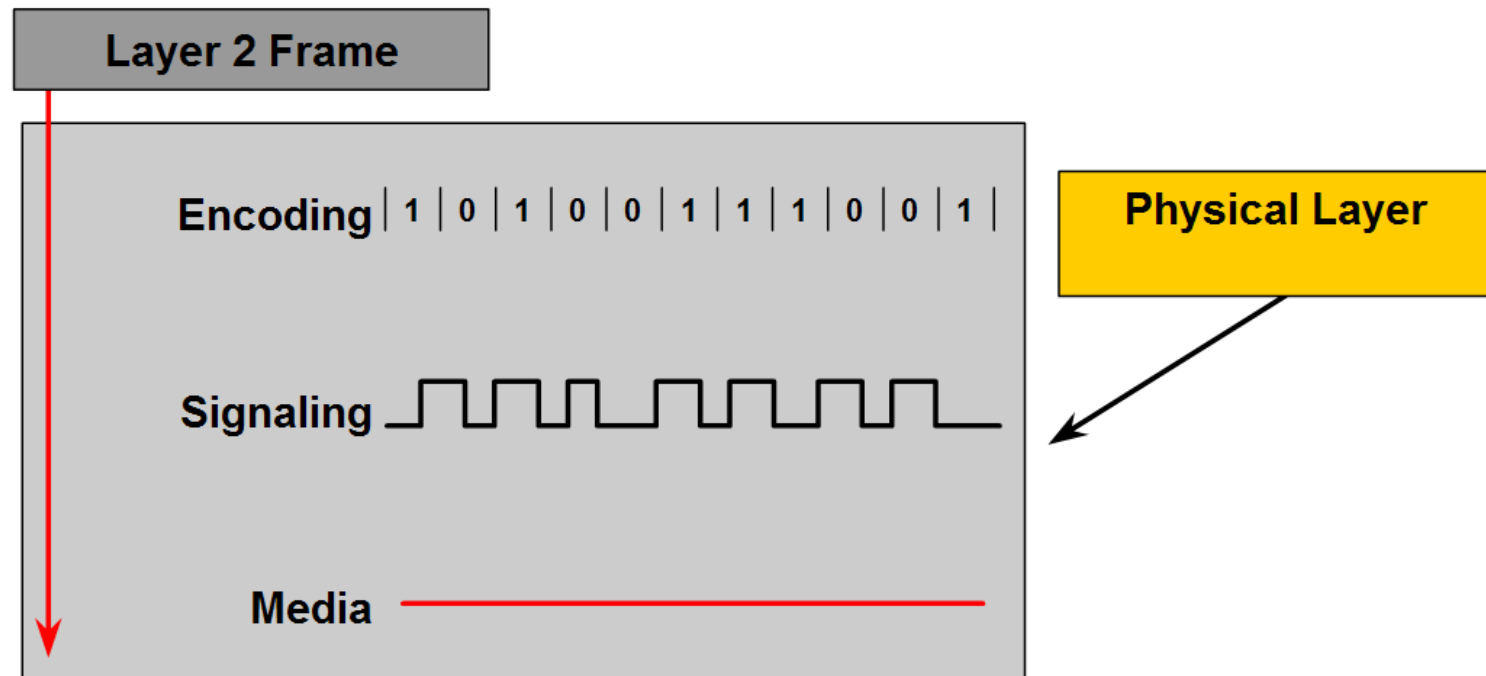

Comparison of Physical layer standards and upper layer standards

Physical Layer Protocols & Services

- Identify hardware components associated with the Physical layer that are governed by standards

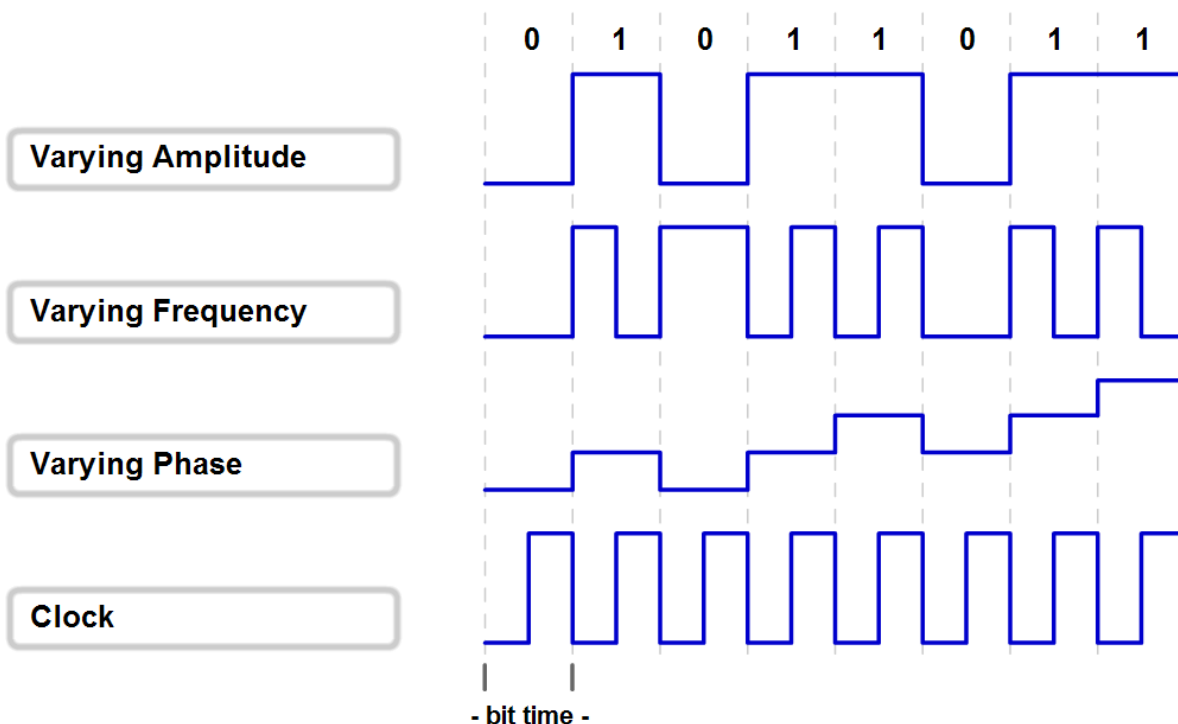

Physical Layer Fundamental Principles

Physical Layer Signaling and Encoding

- Explain that network communication at this layer consists of individual bits encoded onto the Physical layer and describe the basic encoding techniques

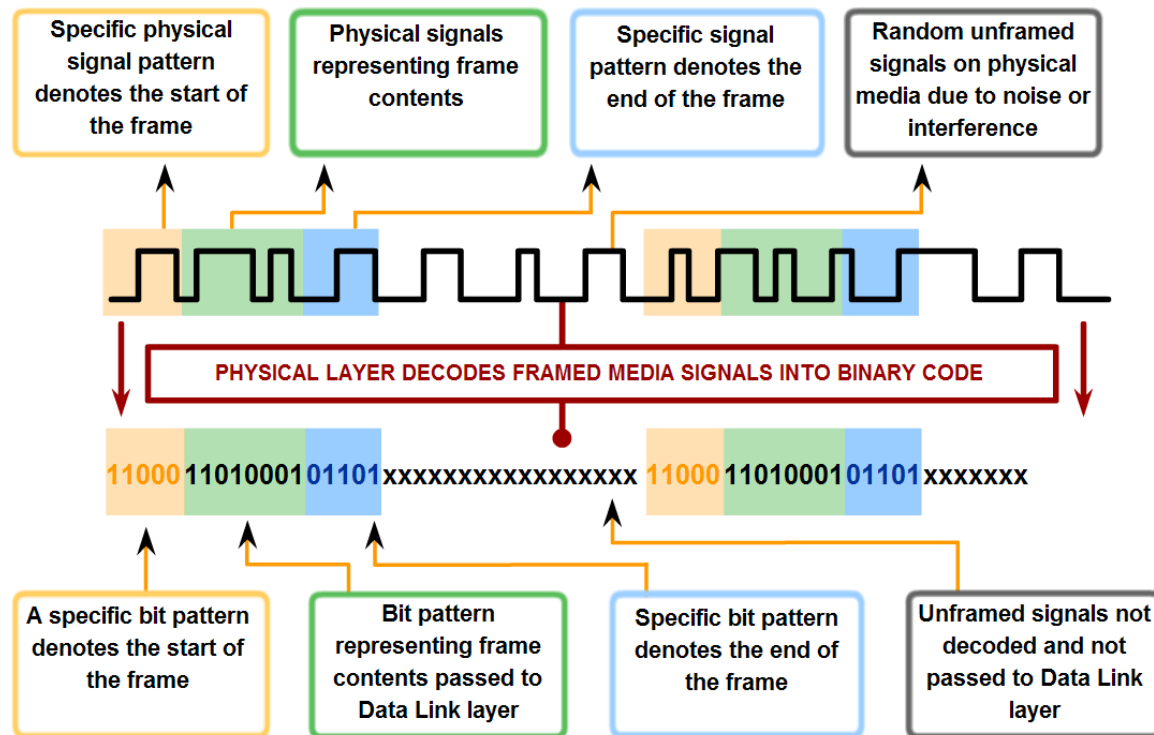

Ways to Represent a Signal on the Medium

Physical Layer Signaling and Encoding

- Describe the role of encoding as it applies to the transmission of bits and explain the value of treating a collection of bits as a code

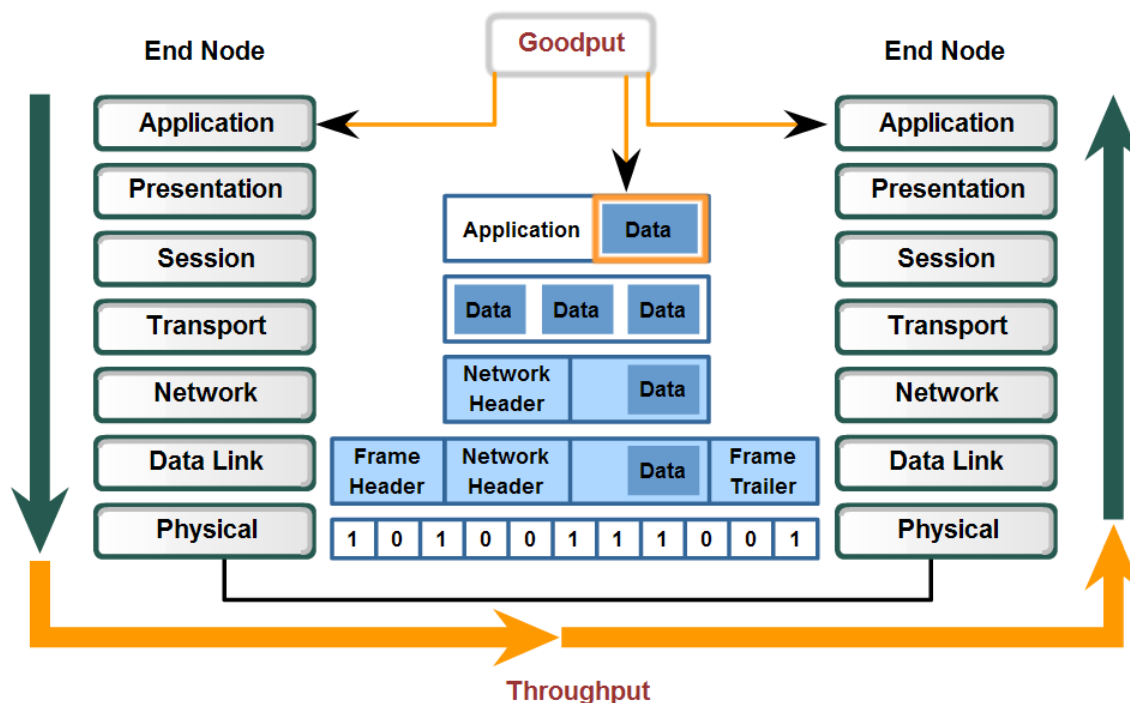

Recognizing Frame Signals

Physical Layer Signaling and Encoding

- Define the terms bandwidth, throughput, and goodput

Data Throughput and Goodput

Data **throughput** is actual network performance. **Goodput** is a measure of the transfer of usable data after protocol overhead traffic has been removed.

Characteristics & Uses of Network Media

Characteristics & Uses of Network Media

- Identify several primary characteristics of fiber cabling and its main advantages over other media

Fiber Media Modes

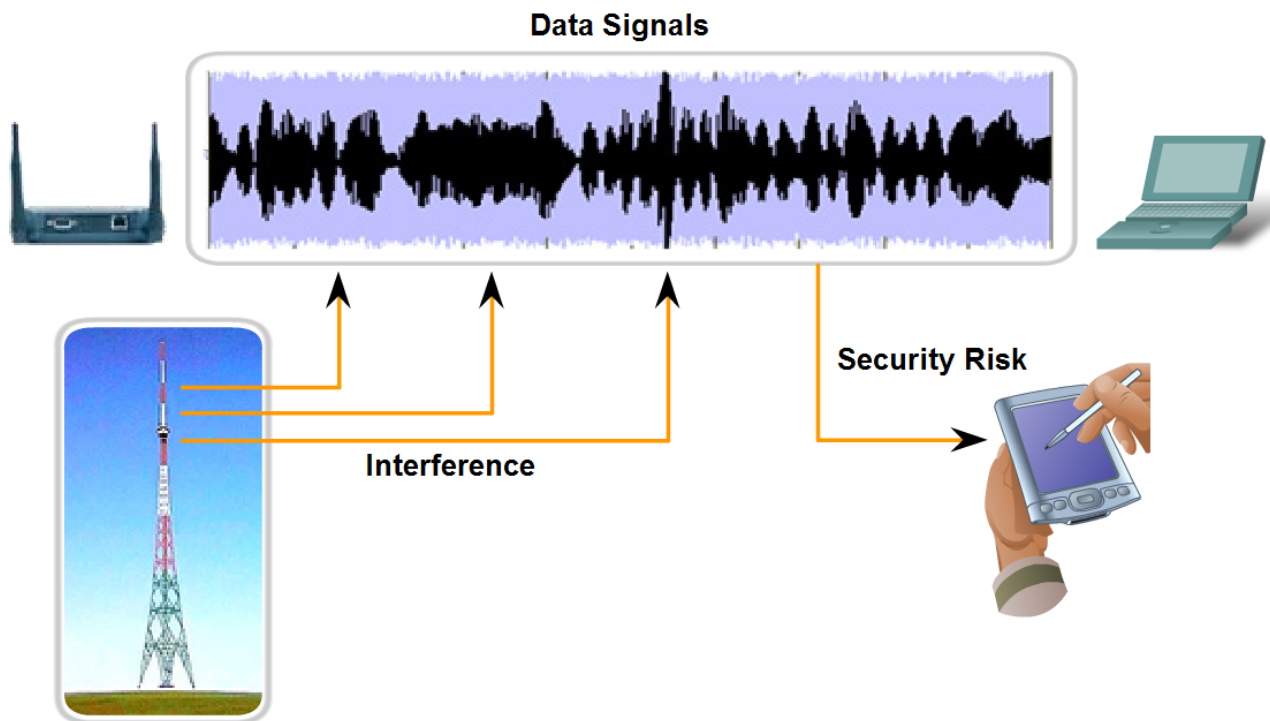

- Small Core

- Uses lasers as the light source often within campus backbones for distance of several thousand meters

- Larger core than single-mode cable (50 microns or greater)
- Allows greater dispersion and therefore, loss of signal
- Used for long distance application, but shorter than single-mode (up to ~2km, 6560 ft)
- Uses LEDs as the light source often within LANs or distances of couple hundred meters within a campus network
